Office Action Summary

DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371[®] of this title before the invention thereof by the applicant for patent.

2. Claims 1-3,5-17 and 21-25 rejected under 35 U.S.C. 102(e) as being clearly anticipated by Guttag et al. (5,465,224).

Guttag et al. discloses in figure 5 the same circuit including a multiplier (12) (see also figures 1-17 and their description), an arithmetic logic units (230) (see also figures 25 and 26 and their description), a control register (245) which define a tree port parametrised logic function to be performed by the ALU, a register unit (REGISTERS), a shift register unit (230,235) and bus structure as claimed.

3. Claims 1-3, 7-17 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Birman in view of Wong et al. and Doyle et al. and further in view of Guttag et al.

The combination of Birman, Wong et al. and Doyle et al as set forth in paragraph 7 of the Office action dated 05-09-97 suggests the invention substantially as claimed. It is noted

that the combination of references does not disclose claim feature that the ALU has at least three operand inputs, and a control register contains a plurality of bits which define a three port parametrised logic function to be performed on the three operand inputs as now added to the claims. However, Gutttag et al. disclose in figure 5 an arithmetic logic units (230) (see also figures 25 and 26 and their description), a control register (245) which define a tree port parametrised logic function to be performed by the ALU as claimed. It would have been obvious to a person of ordinary skill in the art to further provide the combination of references an ALU and a control register as taught by Gutttag et al. in order to have more flexibility in processing image signal.

4. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

5. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
